

For rail and infrastructure companies

Infrastructure for sustainable travel.

Farleda is developing a shared foundation for mobility data, journey planning and traceable emissions calculations. We start with European rail and want sustainable travel to become an everyday choice.

A concrete starting point for your organisation

A paid twelve-week pilot: one corridor or station cluster, authorised data, agreed reference cases and a final report. Railway operators test a planning and booking hand-off; infrastructure partners test a data or information use case. Pricing on request.

Position as of 11 October 2026

Website locally tested, with core journeys, research and mission in seven languages. The current product preview uses existing components with synthetic data. A Passport records a plan; a signature alone proves neither travel nor avoided emissions. Live operation remains to be verified.

Free open beta: 31 October to 31 December 2026. Secure pilot partners by year-end; production targeted from early 2027, subject to technology, contracts, data rights and funding.

Mission 2027–2030

2027 Prove the operation. · **2028** Connect across borders. · **2029** Open the infrastructure. · **2030** Make sustainable travel the standard.

Qualitative ambition, dependent on partners, data, validation and financing. Horizon Europe application planned: research partners sought; no submission or funding award.

Team and operator

Raphael Lugmayr, cofounder & CTO · Sebastian Kern, cofounder & CPO. Other contributors remain unnamed at their request.
